SEALINER PS SAPPHIRE

True to CVSTOS' pioneering design, the Sealer PS line overturned existing expectations by introducing an ingenious nautical style. The latest newcomer to this iconic collection defines new horizons for transparency in a limited edition.

Visual clarity and teak wood create an unmistakable identity

Directly inspired by the propeller of a motor yacht, the small second indicator interplays with the transparency of the skeletonized calendar disc displaying the date through an aperture at 6 o'clock. Beneath the Super-Luminova coated dauphine hands that match with the beveled hour markers, the sophisticated dial captures a high-tech parade of bridges and plates overlapping the refinement of CNC processed inlaid teak wood. The sapphire crystal case unveils the complex arrangement of the CVSTOS CVS410 caliber. Housing a high-density Tungsten alloy rotor, this self-winding mechanical movement beats to the rhythm of 28,800 vibrations per hour.

A limited edition where transparency makes the difference

With not much to hide, this crystal-clear limited edition of 25 pieces, features a full sapphire crystal case that offers a captivating spectacle of transparency. Fitted with a screw-down crown designed according to the model of a yacht's deck filler cap, the case is water-resistant. The Sealer PS Sapphire is to be worn with a rubber or alligator leather strap featuring a folding clasp.

Crystal-clear perspectives

Timeless refinement and mechanical art underline this exceptional timepiece, where the aesthetic codes of mega yachts and a streamlined design converge to form a bond that will propel the CVSTOS Sealer PS Sapphire towards new horizons.
