NEW CHALLENGE TWIN-TIME

Colors, materials and functions offer Cvstos infinite possibilities for technical and stylistic innovation. Celebrating time from a sportier perspective, this second edition of the Challenge Twin-Time features audacious color combinations and exposes its watch mechanisms to the rhythm of a world in perpetual motion.

The inspiration for the Challenge Twin-Time II stems from the brand's core values: precision, performance and creativity. These mechanical self-winding timepieces feature an ingenious combination of a second time zone and an a big date. The additional time zone is displayed on a rotating disc with no hands and an indicator at 6 o'clock. The date is read by two openworked

discs that meet under an aperture at 12 o'clock. All functions can be set using the screw-down crown.

“ALL THE ESSENCE OF CVSTOS IS TO BE FOUND IN THIS LATEST WATCH CREATION, RESOLUTELY CONTEMPORARY”

The Challenge Twin-Time II case enhances the rare aesthetics of this timepiece, offering a real scope for different variations. It is declined in steel, 5N rose gold or carbon fiber, a composite material with warm tones and an incomparable feel. The semi-open dial is embellished with a series of horizontal blades skilfully inclined to reproduce the aerodynamic line of a Formula 1 car's front wings. As part of a global aesthetic vision at every stage of the design process, Cvsstos adds a palette of five different colors to the dial.

With a power reserve of 42 hours, the CVS551 caliber is a self-winding mechanical movement that beats at a frequency of 28,800 vibrations per hour. The movement's performance is considerably enhanced by an oscillating weight made of tungsten 88 alloy, which can be seen through the transparent caseback. Water-resistant to 100 meters, the Cvsstos Challenge Twin-Time II is fitted with a rubber strap featuring the dial's exclusive design.
